SUMMARY

Operations-focused software engineer with 4 years of experience building internal tools, workflow automation, and reporting systems. Strong record of turning ambiguous business requests into reliable production features.

EXPERIENCE

Software Engineer

Mar 2023 – Present

Northstar Logistics

Austin, TX

- Built a document-generation workflow that reduced weekly client-report preparation from 6 hours to under 40 minutes.
- Reworked a dashboard query path, cutting median load time by 48 percent for 120 internal users.
- Partnered with operations leads to define acceptance criteria, test edge cases, and ship 14 workflow improvements.

Associate Developer

Jun 2020 – Feb 2023

Bluebeam Analytics

Denver, CO

- Created Python scripts that reconciled invoice exports and flagged duplicate charges before month-end close.
- Maintained React views for customer usage reporting and improved form validation across three core flows.
- Wrote onboarding documentation that shortened new analyst setup time by two days.

PROJECTS

Renewal Risk Tracker

2024

- Combined product usage, support tickets, and renewal dates into a weekly account-health report for customer success.

Template QA Runner

2023

- Built a lightweight test harness for generated PDFs, checking page count, missing sections, and broken links.

SKILLS

Python, Django, JavaScript, React, SQL, Celery, Playwright, GitHub Actions, API integrations, data cleanup, stakeholder interviews

EDUCATION

B.S. Computer Science, University of Colorado Boulder
